

# Check list – Spill of hazardous material

1. Press the blue button to alarm the local area (the orange light will start flashing) and inform people around you

2. Seal off the area, use the “Caution” sign

3. If needed call for help

4. Pour Vermiculite on the spillage or cover it with an absorbent pad

5. If a biohazard spill, cover it with an absorbent pad before deactivating it with e.g 1% sodium hypochlorite solution

6. Read “Chemical Spill” document and follow the instructions

7. Read the “Emergency procedure for larger spills of hazardous chemicals” document

8. If needed call for help

9. When the spill is cleaned up – reset the local alarm by pressing the blue button again

If needed get the spill trolley from 8810 or additional spill kits from other labs
