

**Junior Faculty**  
Karolinska Institutet

## **The Karolinska Institutet Discovers series**

### **Mission statement:**

The KI Discovers series aims to highlight outstanding new research at Karolinska Institutet to provide insight into the latest scientific achievements across a variety of disciplines.

Junior Faculty interprets scientific achievements to mean: recent high impact publications, recruitments to KI made in international competition and external prizes received.

### **Speakers will be selected using the following criteria:**

#### Inclusion criteria

- Publication in high impact journals (Science, Nature and Cell, potentially E-life), where the author is first or last author.
- Top one journal per field provided by library covering disciplines represented at KI.
- Newly recruited Forskarassistents or Forskare (in the FS Career Ladder) and Professors to KI (external recruits).

#### Exclusion criteria

- Presented in the last 2 years (including similar methods etc.). This is to achieve a broad coverage over all research areas and researchers.
- Research publication not older than 1.5 years at time of invitation.

#### Speakers will be selected taking into account

- 1) Research field – to guarantee a broad representation of fields while ensuring that interest in core-fields is high (this will require an overview from the library over research fields at KI and their representation in %).
- 2) Gender and age distribution.
